FREELANCE PROJECT REPORT

Cisco Packet Tracer Network Implementation

T316 Advanced Networking | Design, Implementation & Review

PREPARED BY

Ammar Yasser Abdel-Zaher Ahmed

Network Engineer | Freelancer on Nafezly

PLATFORM

Nafezly Freelance Marketplace

REPORT DATE

November 2026

Confidential - prepared as a record of completed freelance work

1. Executive Summary

This report documents a freelance engagement completed on the Nafezly marketplace for the academic course **T316 Advanced Networking**. The client requested a network engineer experienced with **Cisco Packet Tracer** to design, configure and document a complete enterprise-style network scenario, including routing, VLAN segmentation, network security and a final technical report.

The project was delivered within the agreed three-day window. Deliverables comprised the full Packet Tracer project archive and a detailed technical report in Word format. The client confirmed receipt, the deal was marked **Completed**, and the engagement received a **five-star rating**.

Engagement	T316 Advanced Networking - Cisco Packet Tracer implementation and review
Freelancer	Ammar Yasser Abdel-Zaher Ahmed (Network Engineer)
Client	Omar Khalaf (Egypt)
Deal reference	#21967
Timeline	3 days
Status	Completed
Client rating	5 / 5 stars

2. Project Overview

The project was published on Nafezly with a budget range of USD 10-25, a three-day delivery window and five applicants. The listing asked for a network engineer to help carry out an academic project for the Fall 2026 term of T316 Advanced Networking. The final scenario was to be selected after discussion, with the freelancer advising on the option that is easiest to implement and best defined.

Requirements stated in the project listing:

- Design an integrated network using Cisco Packet Tracer or GNS3.
- Configure network devices and implement routing protocols.
- Segment the network into subnets using VLANs.
- Apply the required network security measures.
- Troubleshoot network problems in the proposed scenario.
- Prepare the final technical documentation for the project.

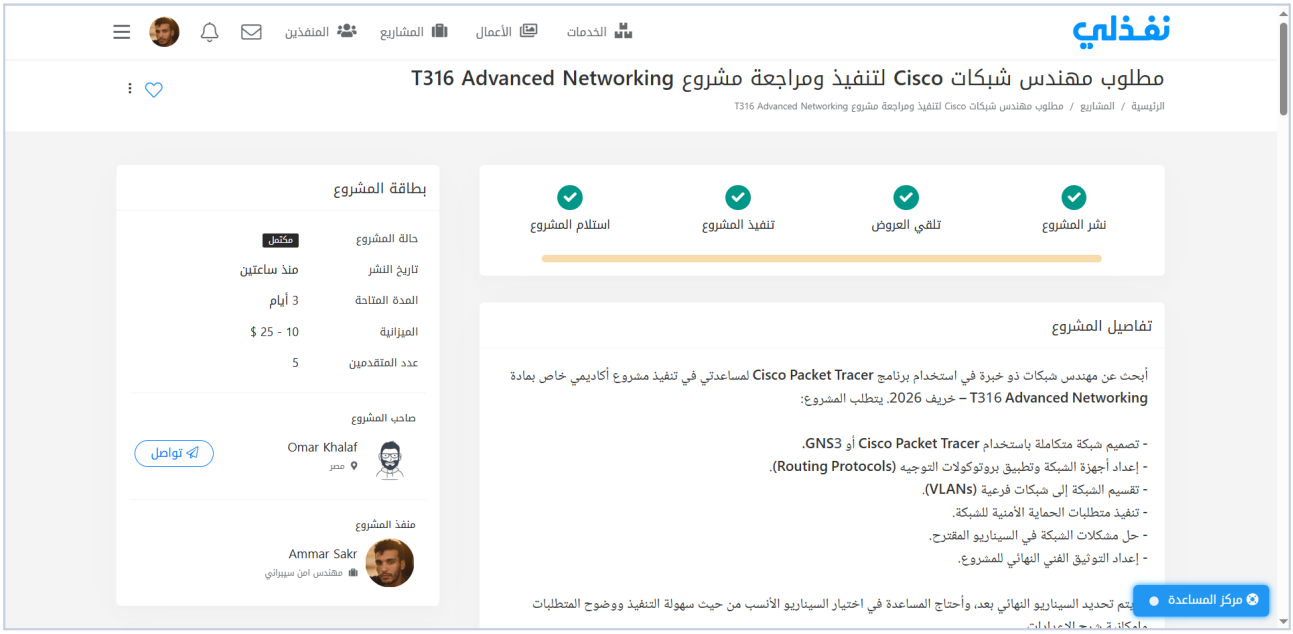

Figure 1 - Nafezly project page showing the requirements, budget, duration and completed status.

3. Scope of Work and Agreement

After the client's initial message, scenario selection and scope were clarified directly in the project chat. The key points of the agreement are summarised below.

Initial request	The client asked for help with a Cisco Packet Tracer project for an Advanced Networking course covering VLANs, security and routing, plus a final report explaining everything. Required within 3 days at a budget of about EGP 500.
Scenario selection	After reviewing the options, I recommended Scenario 1 (a pharmacy network) as the easier and cleaner option that could be completed in a short time. The client agreed with this choice.
Expanded scope	The client clarified that the work was more than a network design. It also required troubleshooting of five network issues, a technical report, a VLSM addressing table with explanation, OSPF routing, security configuration, and screenshots proving that every part works.
Inclusions	The agreed price covered the entire project file, the report and the documentation, with nothing extra billed.
After-sales support	I confirmed that I would support the client throughout and make any required modifications after delivery.

Final deliverables

- Complete Cisco Packet Tracer project (configured topology, delivered as a compressed archive).
- Technical report (Word document) covering the design, VLSM addressing table, OSPF configuration, security measures, troubleshooting and verification screenshots.
- Verification evidence demonstrating that each configured feature works as intended.

4. Communication and Project Execution

All coordination took place in the Nafezly deal chat, which provides a time-stamped record of requirements, agreement and delivery. The client was kept informed at each stage and responses were prompt.

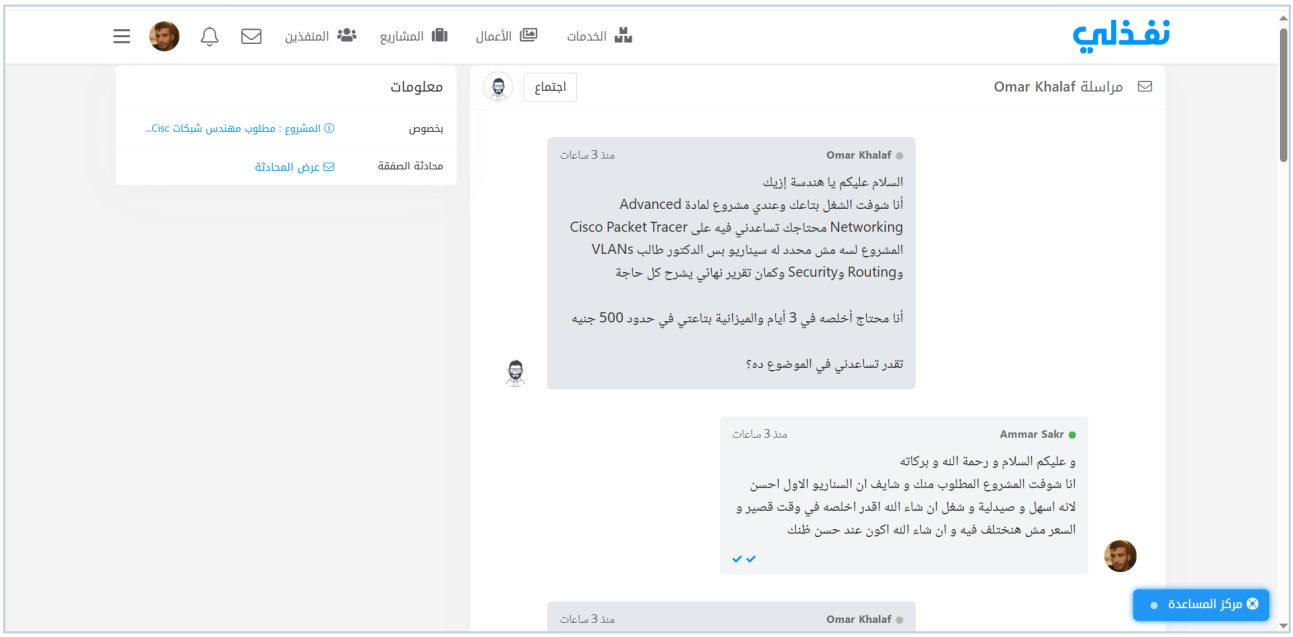

Figure 2 - Opening exchange: the client describes the course project; I review the request and recommend Scenario 1 (pharmacy) as the faster and simpler option.

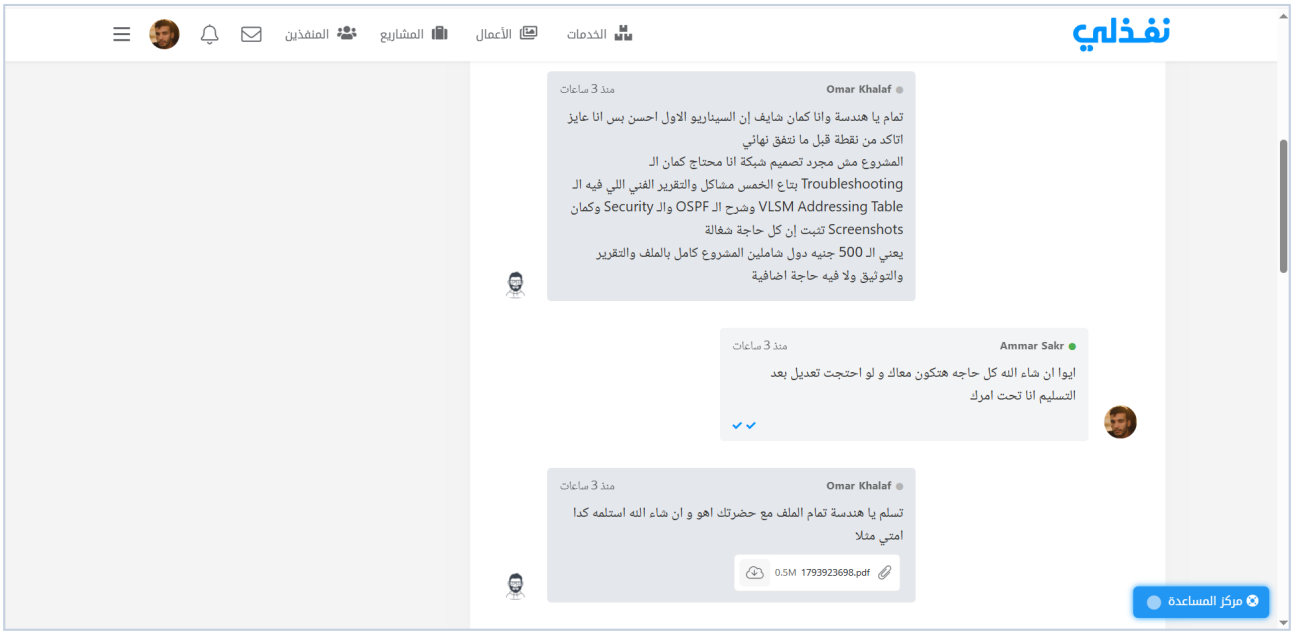

Figure 3 - Scope clarification (VLSM table, OSPF, security, troubleshooting, screenshots, report) and agreement on price; the client then shares the project brief file.

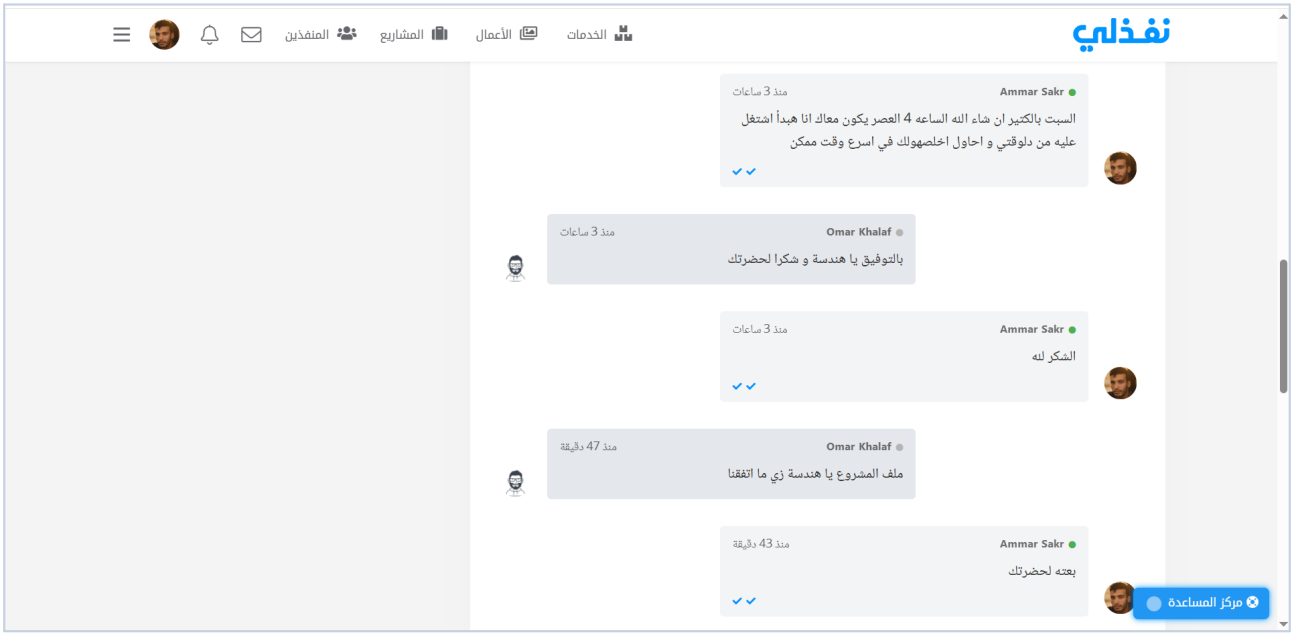

Figure 4 - Schedule confirmed: work begins immediately with a working session arranged for the following Saturday, with the aim of delivering as early as possible. The client then re-shared the project file.

5. Delivery and Completion

The complete project was delivered ahead of the working session originally planned. Both the Packet Tracer project archive and the technical report were uploaded to the deal chat, and the client acknowledged receipt and thanked me for the work. The deal page records the status as **Completed** with a five-star client rating.

Delivered files	Project archive (RAR, 2.7 MB) and technical report (DOCX, 2.5 MB)
Client feedback	Client confirmed receipt and expressed thanks
Deal status	Completed
Rating	5 out of 5 stars

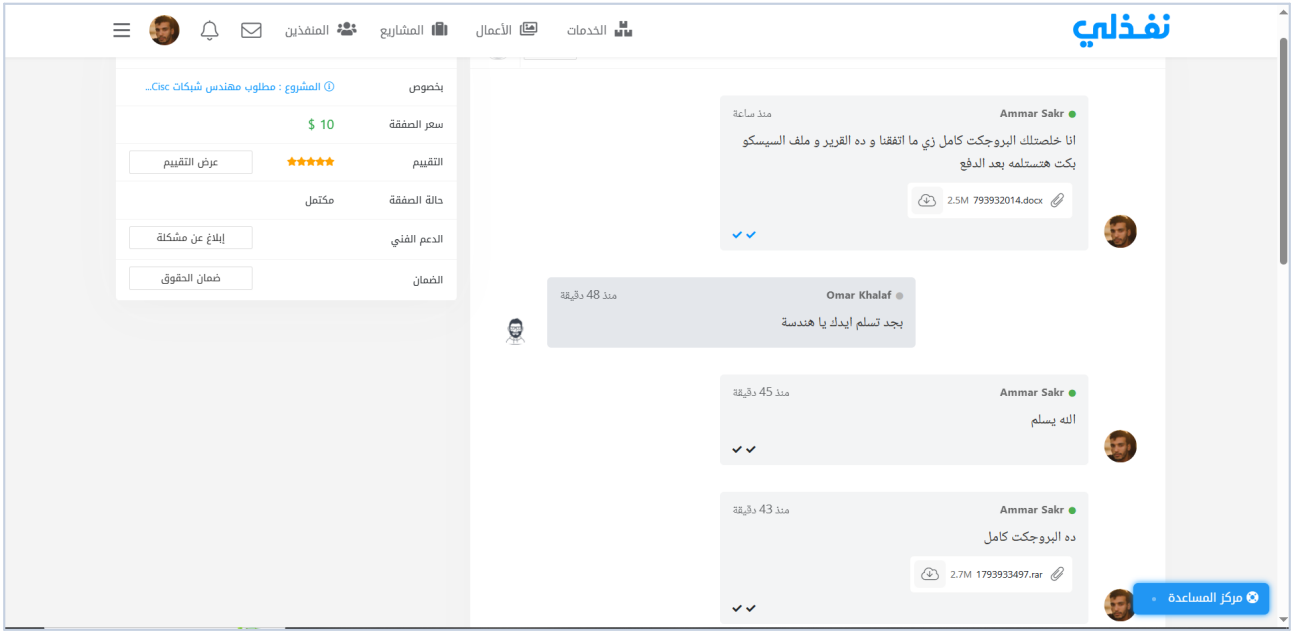

Figure 5 - Delivery of the full project archive and the technical report, the client's acknowledgement, and the deal summary showing Completed status and a five-star rating.

6. Payment Record

Payment for the deal was released through the platform's escrow system after completion. The earnings entry appears in my account balance as profit from the deal, confirming successful closure of the engagement.

Deal price	USD 10.00
Credited to account	USD 8.50 (after platform commission)
Transaction type	Profit from deal #21967 - completed

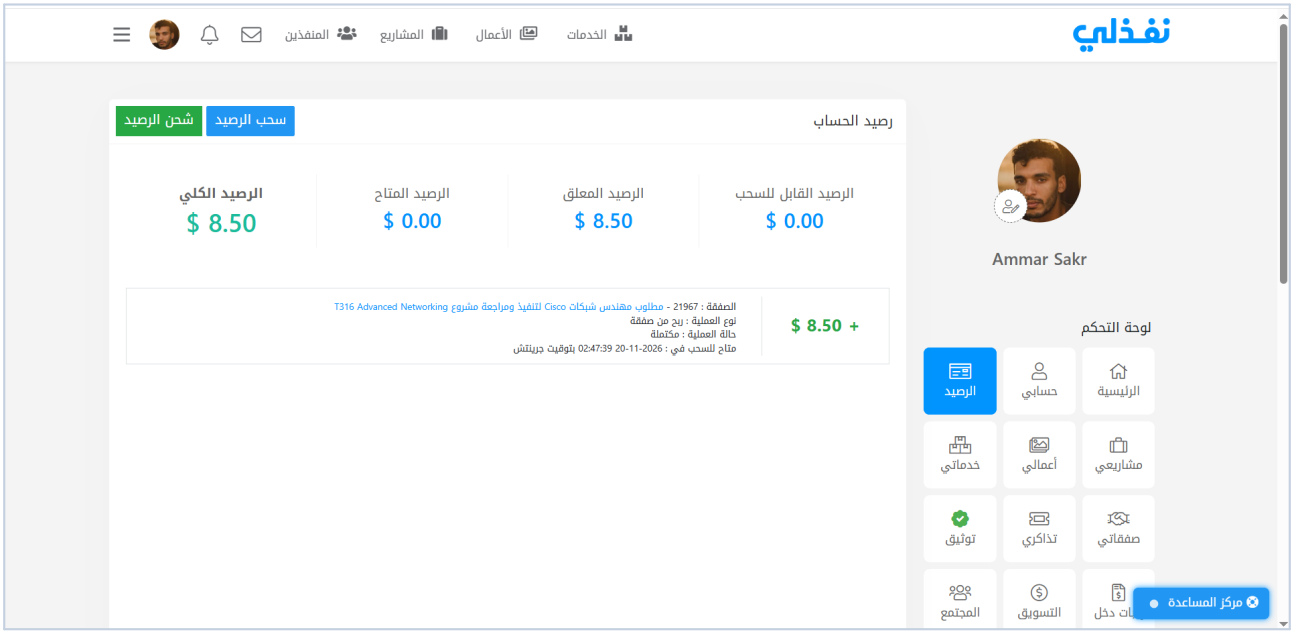

Figure 6 - Account balance on Nafezly showing the completed deal's earnings credited to the account.

7. Conclusion

The engagement was completed successfully, on time and to the client's satisfaction. Clear scoping at the outset, transparent communication throughout and early delivery of a full project and report resulted in a closed deal with a five-star rating. This report serves as a verifiable record of the work completed, supported by screenshots taken directly from the platform.

Key strengths demonstrated

- **Technical scope:** OSPF routing, VLSM addressing, VLAN segmentation, network security and troubleshooting in Cisco Packet Tracer.
- **Documentation:** Complete technical report with addressing tables and verification screenshots.
- **Reliability:** Delivered within the deadline and responsive to the client's clarifications.
- **Client satisfaction:** Completed deal with a five-star rating.
